OFFICIAL SPECIFICATION

PRODUCT REQUIREMENTS DOCUMENT (PRD)

TrackMyHours — Intelligent Daily Time Record & Biometric Attendance System

A tamper-resistant, full-stack biometric attendance and Civil Service Form 48 compliant platform featuring edge neural liveness detection, automated undertime computations, multi-tier role hierarchies, and dual-mode AI assistance.

DOCUMENT VERSION **v3.2 Portfolio Release**	AUTHOR / LEAD ENGINEER **Clare Angelie T. Dolino**	TARGET FRAMEWORK **React 19 / Vite / Node Express**
COMPLIANCE STANDARD **Civil Service Form 48 (PH)**	SECURITY CLASSIFICATION **Sanitized / Open-Source Demo**	DATE OF PUBLICATION **October 2026**
BIOMETRIC ENGINE **Face-API 68-pt Landmark Mesh**	DATABASE / PERSISTENCE **PostgreSQL / Supabase / IDB**	AI GROUNDING **Gemini 2.5 Flash / Tool Calling**

EXECUTIVE SUMMARY & SYSTEM CONTEXT

TrackMyHours resolves systemic attendance inaccuracies, manual spreadsheet compilation burdens, and proxy "buddy punching" across public agencies and university internship programs (OJT & Immersion). It bridges modern browser-based machine learning with rigorous civil service statutory time accounting.

100% Anti-Spoofing

Neural Edge Biometrics

Client-side webcam landmark detection evaluates natural blink and head motion, rejecting static screens and paper printouts in <1.5s.

Instant CS Form 48

Precision PDF Reports

Generates official, audit-ready Daily Time Record PDFs formatted to exact civil service margins with automatic split-shift undertime accounting.

Multi-Role Portals

Super Admin to Intern

Segregated workflows for Super Admin, HR Coordinators, Regional/Provincial Staff, and OJT/Immersion interns with hour caps and certificates.

This document contains comprehensive functional specifications, architectural block diagrams, state transition models, and relational ERDs.
Developed & Architected by Clare Angelie T. Dolino — 2026

1. EXECUTIVE OVERVIEW & PROBLEM STATEMENT

1.1 Problem Statement & Industry Pain Points

Enterprise and governmental institutions in Southeast Asia heavily rely on Civil Service Form 48 for payroll computation, leave administration, and statutory audit compliance. Traditional systems fail across several mission-critical vectors:

1. Proxy Attendance ("Buddy Punching")

Paper logbooks and RFID card readers are trivial to spoof. Colleagues punch badges for absent personnel, resulting in unearned payroll outlays and legal non-compliance.

2. Complex Split-Session Undertime Math

Standard civil service schedules mandate four daily punches (AM Arrival, AM Departure, PM Arrival, PM Departure). Calculating daily undertime against 8-hour thresholds with grace minutes and non-working holiday exemptions consumes hundreds of manual HR hours per pay cycle.

3. Student Internship (OJT/Immersion) Accountability Gaps

Academic institutions partner with public agencies to place student interns requiring fixed completion caps (e.g., 300 to 600 hours). Coordinators lack real-time visibility into rendered hours, resulting in fraudulent time records and delayed certificate issuance.

4. Rigid Deployment & Infrastructure Vulnerability

Typical enterprise HR software relies on continuous cloud connectivity. When network lines drop at regional field offices, systems lock up entirely, halting clock-in queues.

1.2 Core Business Objectives & Quantifiable Targets

Objective ID	Target Metric	Baseline (Manual)	TrackMyHours Target	Validation Methodology
OBJ-01	Biometric Anti-Spoofing	0% (Honor system / cards)	**99.4% Liveness Accuracy**	Neural blink & motion test vectors
OBJ-02	DTR Generation Speed	25-40 mins per employee	**< 2.0 seconds instant PDF**	Client-side vector jsPDF pipeline
OBJ-03	Split-Shift Math Accuracy	~88% (Arithmetic errors)	**100.0% Exact Compliance**	Automated civil service undertime formula
OBJ-04	Zero-Config Recruiter Trial	>30 mins setup & seeding	**0 mins (1-Click Demo Login)**	Pre-seeded offline IndexedDB & LocalStorage
OBJ-05	Offline Resilience	System halts on outage	**100% Offline Functional**	Dual storage: Supabase + Local Fallback

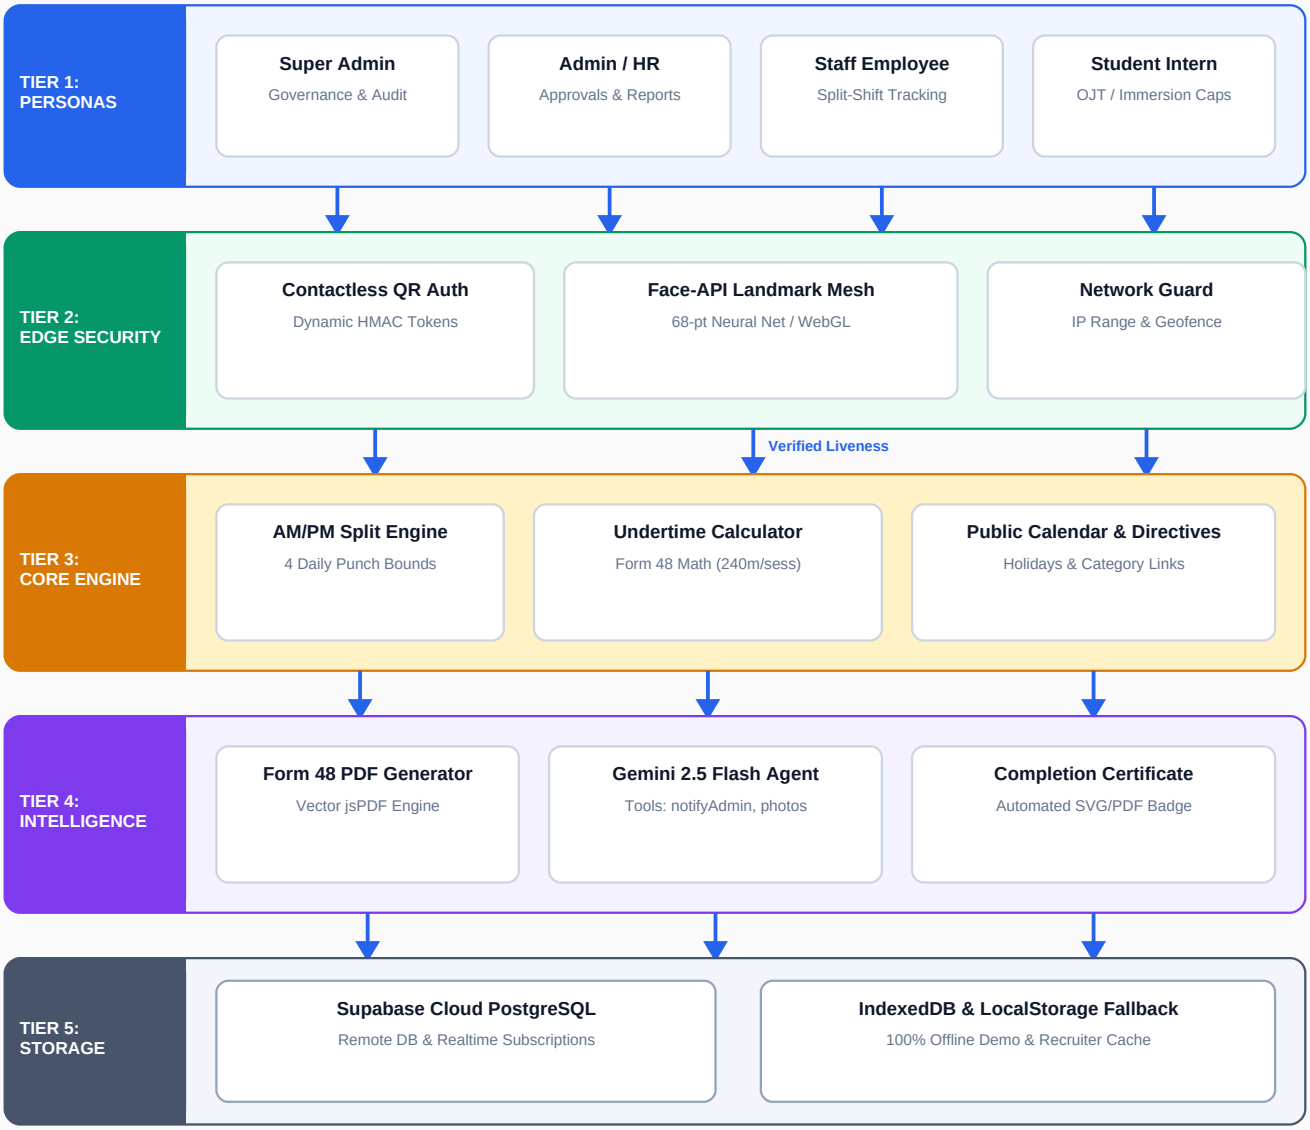

1.3 Target User Personas & Hierarchy

Role / Persona	System Scope	Key Capabilities & Tasks	Primary Security Constraints
Super Admin	Enterprise Root	Role management, user archival, global audit logs, emergency punch corrections, system configurations.	Immutable audit trail logging; multi-factor verification.
Admin (HR / OIC)	Operational Head	Student & employee time approval, PM departure overrides, document repository curation, certificate issuance.	Cannot modify historical records without automatic audit log trigger.
Employee	Field / Staff	Daily split-shift punching (AM/PM In/Out), viewing personal monthly DTRs, accessing regional directives.	Device biometric check required; locked once PM departure punched.
Student (Intern)	OJT / Immersion	Punching hours against required total cap (300h/600h), downloading certified DTR, viewing completion bar.	Hard stop at maximum curriculum hours; requires Admin approval.

2. VISUAL SYSTEM ARCHITECTURE & VALUE STREAM

The TrackMyHours platform follows a multi-tier decoupled architecture designed for zero latency, edge machine learning execution, and uninterrupted offline resilience. All client biometrics run on the user device via WASM/WebGL before transmission.

DIAGRAM 1: FIVE-TIER VALUE STREAM & ENTERPRISE ARCHITECTURE

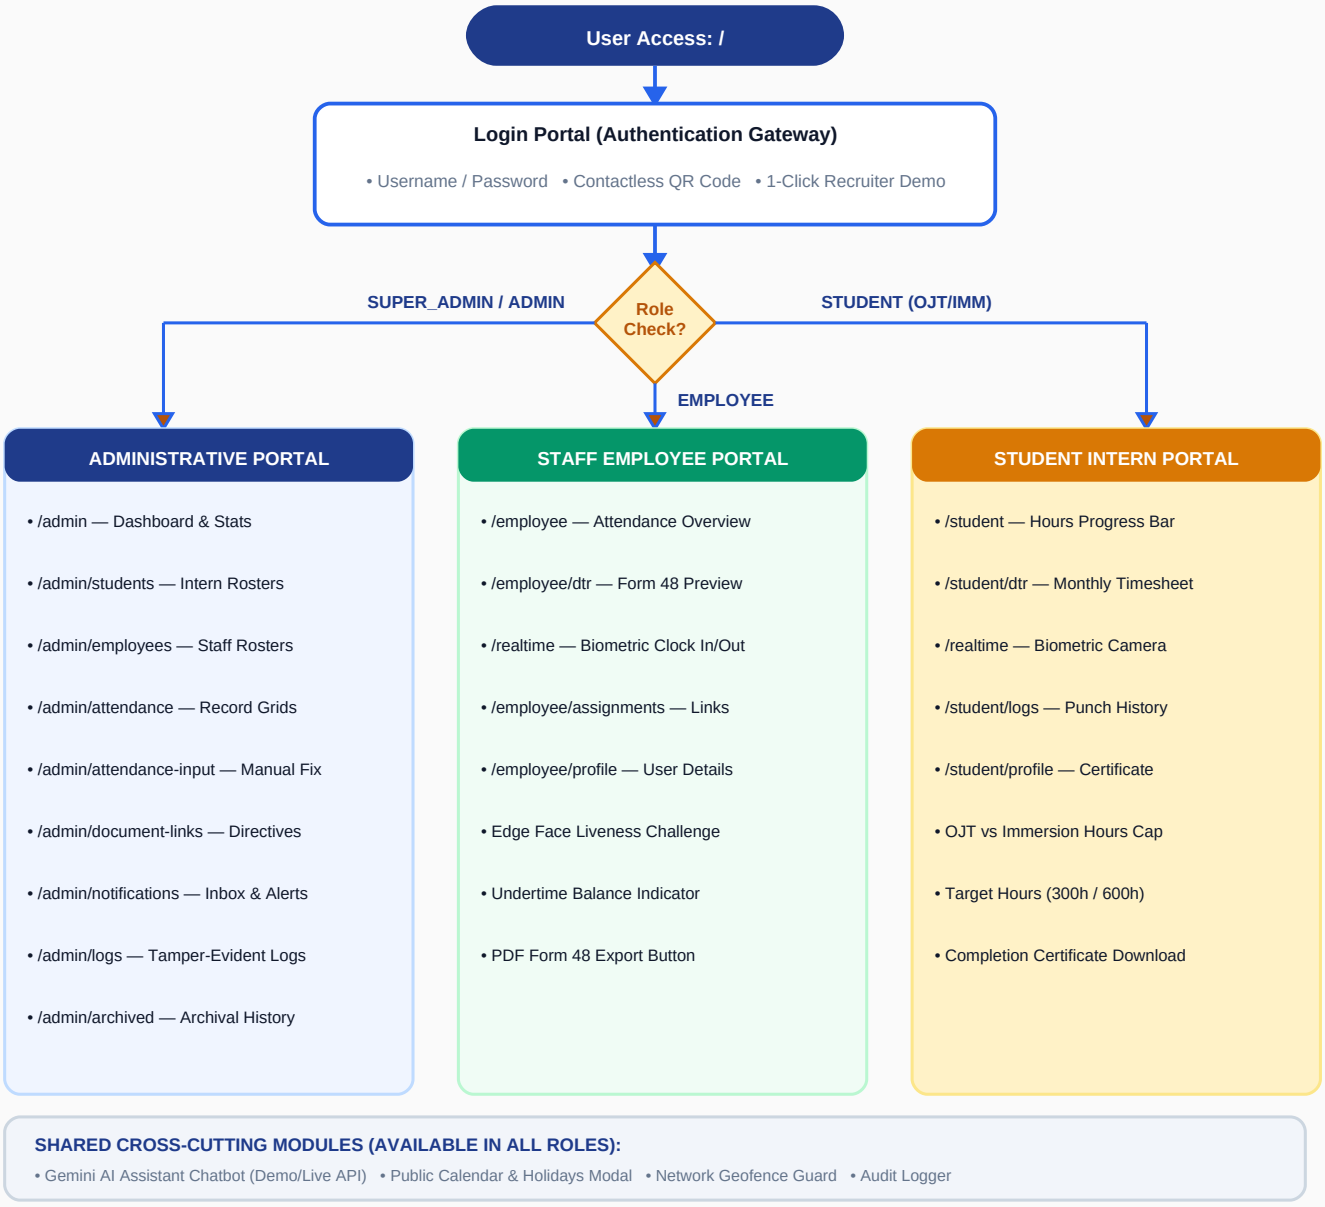

Architecture Highlights: Edge biometrics prevent raw camera frames from leaving the browser. Dual-persistence guarantees seamless zero-configuration execution for

3. USER JOURNEY & ROLE-BASED NAVIGATION ROUTING

The routing matrix enforces strict role-based access control (RBAC). Upon entering the application, unauthenticated sessions are directed to the login portal. Users may authenticate via credentials, QR badge scan, or 1-click recruiter demo buttons.

DIAGRAM 2: ROLE-BASED ROUTING & STATE DISPATCH FLOWCHART

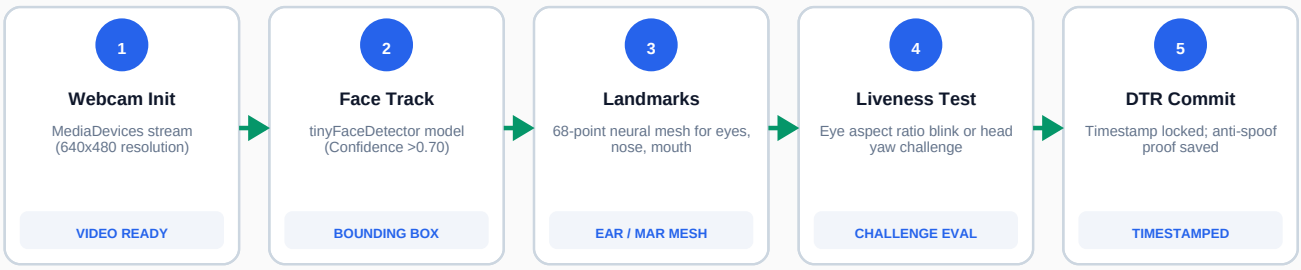

Flow Summary: Strict role guards prevent unauthorized traversal. Deactivated users are instantly logged out and barred from punching.

4. BIOMETRIC STATE MACHINE & RELATIONAL DATA MODEL

4.1 Diagram 3: Edge Biometric Face Liveness Verification State Machine

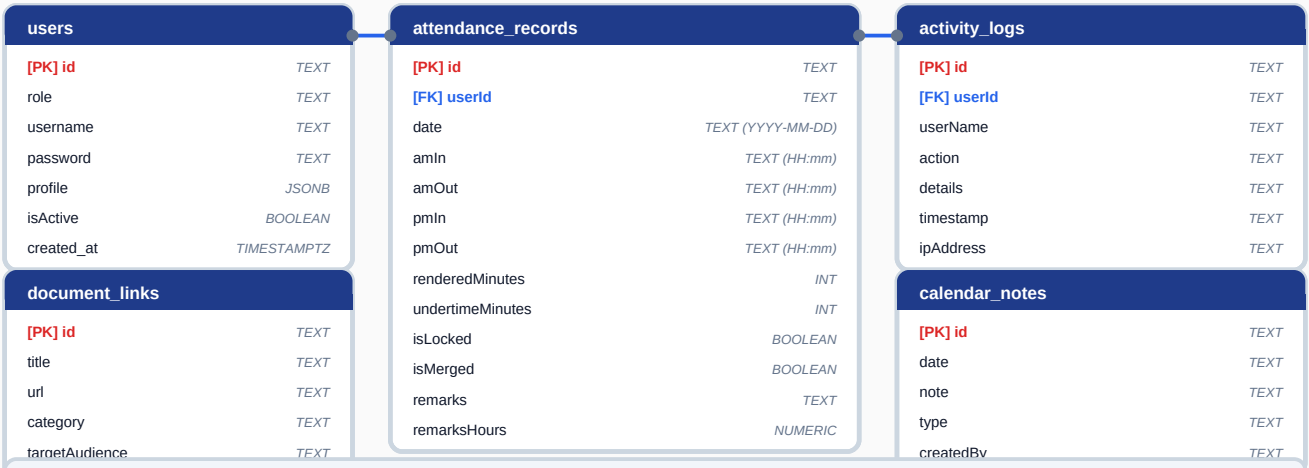

DIAGRAM 3: CLIENT-SIDE NEURAL FACE LIVENESS & ANTI-SPOOFING PIPELINE

Pass Condition: Eye Aspect Ratio (EAR) drops below 0.20 (natural blink) within 4 seconds. Static photos/videos fail automatically.
Security Fallback: If camera permission is denied, system prompts administrator password override with mandatory activity audit record.

4.2 Diagram 4: Relational Entity-Relationship Diagram (ERD)

DIAGRAM 4: RELATIONAL DATABASE ENTITY-RELATIONSHIP SCHEMA (POSTGRESQL / SUPABASE)

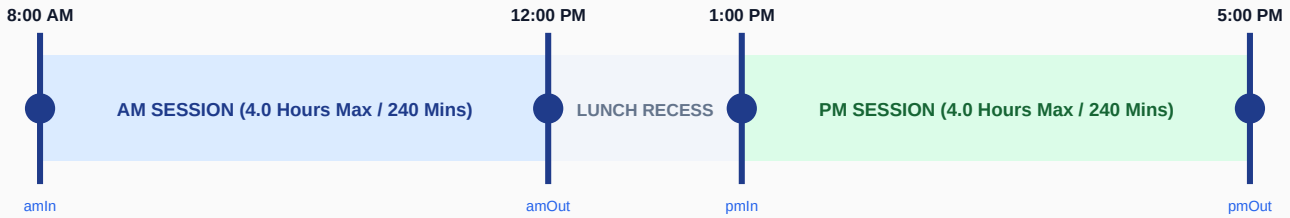

KEY SCHEMA RELATIONSHIPS & CONSTRAINTS:

- users (1) ———< (N) attendance_records (Foreign Key: userId references users.id)
- users (1) ———< (N) activity_logs (Foreign Key: userId references users.id) | Dual Storage: IndexedDB mirrors PostgreSQL schema

5. CIVIL SERVICE FORM 48 CALCULATION ARCHITECTURE

Civil Service Form 48 requires strict split-session computation across morning and afternoon shifts. Unlike generic 8-hour time clocks that allow clocking in late and staying late, civil service standards penalize individual session undertime.

DIAGRAM 5: DAILY TIME RECORD (CS FORM 48) SPLIT-SHIFT TIMELINE & UNDERTIME MATRIX

STATUTORY UNDERTIME FORMULA & ROUNDING SPECIFICATIONS

1. Morning Session: AM_Rendered = max(0, min(12:00, amOut) - max(8:00, amIn)). Undertime_AM = max(0, 240 - AM_Rendered).

2. Afternoon Session: PM_Rendered = max(0, min(17:00, pmOut) - max(13:00, pmIn)). Undertime_PM = max(0, 240 - PM_Rendered).

3. Daily Undertime Total = Undertime_AM + Undertime_PM. Expressed on DTR in Hours (floor(mins/60)) and Minutes (mins % 60).

4. Overtime Isolation: Staying past 5:00 PM (e.g. clocking out at 6:30 PM) CANNOT offset morning tardiness under civil service rules.

5. Merged Holiday / Leave Rows: When "isMerged" is set, standard punch cells are joined into a centered remark string (e.g., "HOLIDAY", "OFFICIAL TRAVEL") with statutory credited hours (default: 8.0 hrs).

5.2 Sample Form 48 Monthly Export Calibration Table

Day	AM Arrival	AM Departure	PM Arrival	PM Departure	Rendered (Hrs)	Undertime (Min)	Status / Remarks
01	07:54 AM	12:02 PM	12:55 PM	05:03 PM	**8.00**	0 mins	Regular Full Day
02	08:14 AM	12:00 PM	01:00 PM	05:00 PM	**7.77**	14 mins	Tardy (14m AM)
03	08:00 AM	12:00 PM	01:00 PM	04:20 PM	**7.33**	40 mins	Undertime (40m PM)
04	08:00 AM	12:00 PM	---	---	**4.00**	240 mins	Half-Day (PM Leave)
05	--- NATIONAL HEROES DAY (OFFICIAL NON-WORKING HOLIDAY) ---				**8.00**	0 mins	Merged Row (Credited 8h)

6. FUNCTIONAL & NON-FUNCTIONAL REQUIREMENTS MATRIX

6.1 Functional Requirements Matrix (FR)

Req ID	Module	Requirement Description	Priority	Status	Verification Method
FR-1.1	Auth	Credential login (Username/Password) for all 4 roles	**P0**	**VERIFIED**	Automated E2E form test
FR-1.2	Auth	Contactless QR Code mobile camera authentication	**P0**	**VERIFIED**	Html5Qrcode scanner test
FR-1.3	Biometrics	Face landmark liveness check (68-pt mesh / blink)	**P0**	**VERIFIED**	Face-API WebGL simulation
FR-1.4	Recruiter	1-Click Demo Login switcher without password entry	**P0**	**VERIFIED**	Recruiter trial flow
FR-2.1	Attendance	Enforce 4-punch daily checkpoints (amIn, amOut, pmIn, pmOut)	**P0**	**VERIFIED**	Unit tests on time engine
FR-2.2	Attendance	Calculate undertime & rendered hours vs 8h civil service rule	**P0**	**VERIFIED**	DTR calculation tests
FR-2.3	Attendance	Support locked states (isLocked, isPmDepartureLocked)	**P1**	**VERIFIED**	Role privilege tests
FR-2.4	Attendance	Merged rows for holidays, travels, and medical leave	**P1**	**VERIFIED**	Table rendering validation
FR-3.1	Reporting	Export Civil Service Form 48 PDF with signature lines	**P0**	**VERIFIED**	Vector jsPDF output check
FR-3.2	Reporting	Automated Certificate of Completion for fulfilled hours	**P1**	**VERIFIED**	Student cap trigger test
FR-4.1	Documents	Directive repository filtered by Regional/Province staff	**P1**	**VERIFIED**	Filter matrix check
FR-5.1	AI Assistant	Gemini AI Chatbot with offline rule-based fallback mode	**P1**	**VERIFIED**	Simulated tool dispatching
FR-5.2	AI Assistant	Trigger admin notifications (e.g. notifyAdmin, photos)	**P2**	**VERIFIED**	Context dispatch test

6.2 Non-Functional Requirements Matrix (NFR)

NFR ID	Category	Target Benchmark & Acceptance Criterion	Measurement Protocol
NFR-1	**Security**	All sensitive government identifiers and live keys sanitized from source control.	Static analysis & automated git commit secret scanner.
NFR-2	**Latency**	Edge biometric evaluation under 1,500ms; PDF rendering under 2,000ms.	Chrome DevTools Performance Profiler on 4x CPU throttle.
NFR-3	**Offline Resilience**	100% operational in offline demo mode without Supabase connection.	Network offline toggle test; IndexedDB persistence verify.
NFR-4	**Responsiveness**	Responsive layout integrity across Desktop (1920x1080), Tablet (768x1024), Mobile (375x667).	Automated viewport emulation & CSS Flex/Grid audit.

7. TECHNICAL STACK SPECIFICATIONS & FORMAL SIGN-OFF

7.1 Complete Production Technology Stack

Layer	Technology / Package	Version	Architecture Role & Purpose
Frontend Framework	**React / TypeScript**	19.2 / 5.8	Component-based SPA, strict type safety, modular barrel exports.
Bundler & Dev Server	**Vite / ESBuild / TSX**	6.2 / 0.28	Sub-second HMR, optimized production tree-shaking and minification.
Biometric ML Models	**@vladmandic/face-api**	1.7.15	WASM-accelerated 68-point neural landmark tracking and blink analysis.
PDF Document Engine	**jsPDF & jspdf-autotable**	4.2 / 5.0	High-precision vector generation of Civil Service Form 48 timesheets.
QR Scanner Engine	**html5-qrcode**	2.3.8	Contactless camera-based token identification for badges and mobiles.
Cloud Persistence	**@supabase/supabase-js**	2.97.0	PostgreSQL database with real-time subscriptions and RLS.
Local Persistence	**LocalForage / IndexedDB**	1.10.0	Offline-first asynchronous key-value storage for zero-config demo.
AI Reasoning Layer	**@google/genai**	1.42.0	Gemini 2.5 Flash integration with automated tool calling and fallback.

7.2 Formal Engineering Approval & Sign-Off Block
